Assembly Instructions for the Pizzaro Pizza Oven Trolley Stand

DO NOT FULLY TIGHTEN THE BOLTS BEFORE ASSEMBLING ALL THE PARTS. It is important to note that while assembling, having two people can significantly ease the process. One person can hold the various components in place while the other focuses on inserting the fixings. The assembly process can often be tricky, and having an extra set of hands can prevent mistakes. Remember, the spanner has been supplied to aid in this task.

1. Before beginning the assembly, layout and identify all the components involved. This includes familiarizing yourself with each part and its respective function. It is crucial that you do not tighten any fixings until the assembly is entirely complete. This approach will ensure greater accuracy and ease in adjustments. Please refer to the accompanying diagram for proper positioning of each component.
2. Begin by loosely assembling the Square Tube (C) to the Pre-assembled Stand (B) using four M6 x 45 bolts and nuts (N1). Loosely connecting these parts at first allows for better alignment and adjustment as you proceed with assembly. Ensuring that everything is properly aligned will save you time and effort later on. Take your time during this step to double-check that everything is positioned correctly.
3. Next, attach the Top Plate (A) to the Pre-assembled Stand (B) using another four M6 x 45 bolts and nuts (N1). This step is vital as it provides the necessary support and stability for the structure. As with the previous assembly stage, do not tighten the bolts completely yet; this will allow for any necessary adjustments as you continue. Ensure that each bolt is inserted correctly to avoid issues during the final tightening.

4. Carefully turn the stand upside down to attach the four castors (D). This is done by screwing the castors into the screw-threaded holes on the Pre-assembled Stand (B). The castors will enable mobility, making the unit easier to move once fully assembled. Make sure each castor is secured properly but do not over-tighten at this stage. Once all castors are attached, you can set the stand right side up again.

5. With the stand now upright, proceed to assemble the Folding Bracket (E) to the Pre-assembled Stand (B) using four M6 x 40 bolts and nuts (N5). The Folding Bracket is essential for the functionality of the unit, providing additional support and stability. Ensure that the assembly is done carefully to maintain the structural integrity. As with previous steps, do not fully tighten the bolts until all parts are in place.

6. Assemble the six Inside Wooden Slats (M) onto the middle steel bar on Pre-assembled Stand (B) using twelve M5 x 40mm bolts and nuts (N3). These slats provide essential support and contribute to the overall strength of the assembly. Position them evenly and ensure they are aligned properly before securing them in place. This step is crucial as it affects both the aesthetic and functional aspects of the final product.

7. Next, attach the four Side Shelf Wooden Slats (G) onto the Folding Bracket (E) with eight M6 x 20 bolts and nuts (N2). This will create additional shelving space, enhancing the utility of the unit. As always, ensure that the parts are properly aligned before tightening any fixings. The correct installation of these wooden slats will contribute to the overall stability and usability of the stand.

8. Assemble the Round Corner Wooden Slat (H) onto the Folding Bracket (E) with four M6 x 20 bolts and nuts (N2). This component not only adds to the structural integrity but also improves the design by providing a smoother aesthetic. Make sure that the slat is secured firmly, as it plays a role in supporting the overall setup. Verify that each bolt is in place before moving on to the next step.

9. Finally, attach the Bottom Grid (F) to the bottom bar of the Pre-assembled Stand by inserting the grid into the designated holes on the bar. This grid serves both functional and design purposes, enhancing the sturdiness of the structure. After securing the grid, it is essential to check that all components are correctly fixed in their positions. Once you've confirmed everything is secure, you can proceed to the final steps.

10. Now, carefully check and tighten all fixings to ensure that everything is assembled correctly and securely. It is crucial to go through each connection to avoid any loose parts that may compromise the integrity of the unit. However, **DO NOT OVER TIGHTEN THE FIXINGS**, as this could lead to damage or deformation of the components. Once all the fixings are tightened appropriately, your assembly is complete, and the unit is ready for use.

Assembly Instructions for the Pizzaro...

Transform your culinary experience with the Pizzaro Pizza Oven Trolley Stand, designed for both functionality and ease of assembly. This comprehensive guide walks you through each step, ensuring a sturdy construction while emphasizing the importance of careful adjustments and proper fixings. With clear instructions and essential tips, you'll create a mobile, stable stand that enhances your outdoor cooking adventures.
